DETAILED ACTION

Response to Amendment

1. Applicant's amendment, filed on March 27, 2007, has been fully considered and entered.

Reasons for Allowance

2. Claims 1-11 and 13-19 are allowed.

3. The following is an examiner's statement of reasons for allowance:

The prior art of record fails to disclose or reasonably suggest all the limitations recited in claim 1. Specifically, the prior art of record fails to disclose a method for monitoring a spin imparted on an optical fiber comprising the steps of photographing a dispersion pattern peculiar to the spun optical fiber with a camera from scattered light; and displaying the photographed dispersion pattern, wherein a form of the spin imparted on the optical fiber is monitored based on the displayed dispersion pattern in combination with the other limitations of claim 1.

Claims 2 and 3 depend from claim 1.

The prior art of record also fails to disclose or reasonably suggest all the limitations recited in claim 4. Specifically, the prior art of record fails to disclose a method for making an optical fiber comprising the steps of photographing dispersion

patterns peculiar to the spun optical fiber comprising the steps of photographing dispersion patterns peculiar to the spun optical fiber from scattered light naturally generated by the spin imparted on the optical fiber; and wherein first and second dispersion patterns are photographed respectively at a first torque point in a clockwise direction and a second torque point in a counterclockwise direction which is symmetric to the first torque point and determining bi-directional symmetry of the imparted spin by comparing the photographed first and second dispersion patterns in combination with the other limitations of claim 4.

Claims 5-11 depend from claim 4.

The prior art of record also fails to disclose or reasonably suggest all the limitations recited in claim 13. Specifically, the prior art of record fails to disclose a method for controlling bi-directional symmetry of alternating symmetrical spins imparted on an optical fiber in an optical fiber making process including the steps of imparting clockwise/counterclockwise alternating spins on the optical fiber by contacting the coated optical fiber to a guide roller and then vibrating the guide roller on the center of an axis substantially parallel to a drawing axis, wherein the method comprises the steps of photographing dispersion patterns peculiar to the spun optical fiber from scattered light naturally generated by the spin imparted on the optical fiber; and wherein first and second dispersion patterns are photographed respectively at a first torque point in a clockwise direction of the optical fiber and a second torque point in a counterclockwise direction which is symmetric to the first torque point, rearranging a center of the guide

roller relative to the drawing axis and the rotating axis so that the number of the photographed first dispersion patterns is coincident with the number of the photographed second dispersion patterns in combination with the other limitations of claim 13.

Claims 14-19 depend from claim 13.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
